- **The most advanced proactive technology:**
Including intrusion prevention, proactive detection and behaviour scanning.
- **In-depth malware audits:**
Malware Radar detects and disinfects hidden threats.
- **Control of network access:**
It prevents infected, dubious or

Panda Security for Business

*"The installation of Panda reduced the cost of our computer maintenance by half."
"For us, Panda is the best antivirus program in the industry"*

Salimane Issifou. Application Administrator, SOS Children's Villages

SOS Children's Villages is protected with Panda Security for Business

SOS Children's Villages is a member of SOS Kinderdorf International. They operate in over 132 countries worldwide and are involved in the development of local communities, through creation of educational, medical and social facilities.

SOS Children's Villages has chosen **Panda Security for Business**, Panda's endpoint security solution for work stations and file servers, to protect its server as well as its 500 computers, in over 10 countries.

Panda Security for Business was chosen for its simplified coverage of a whole network via a console (which allows users to manage protection from a single point) as well as its centralised updates. This allows SOS Children's Villages to rest at ease while navigating their Sponsorship Software, admin and accounting.

SOS also noted that in their research they found that Panda had been noted as the most efficient antivirus program in the world, and that their cost of computer maintenance was reduced by half.

"Before Panda Security, our employees had tried many sharewares to solve computer security problems. It was not easy because after one month trial, security problems arose. Then we decided to shift to a professional computer security program," says Salimane Issifou, the Application Administrator at SOS.

He convinced his regional office to purchase the software for the organisation not only for Benin, where he is based, but also in other West and Central Africa countries. Today, Panda software is used in SOS Children's Villages in more than ten countries including Benin, Rwanda, Chad, Togo and others.

Although they had some initial problems surrounding the installation, they were quickly solved. "The overall impression of Panda is very positive. For us, Panda is the best antivirus program in the industry", assures Mr Issifou.

About SOS Childrens Village

The SOS Children's Villages Association of South Africa is a member of SOS - Kinderdorf International, the largest private welfare organization for children in the world. Over 200 000 children benefit from the various residential, educational and developmental programmes operating in 135 countries.

SOS - Kinderdorf International began in 1949 when the founder Hermann Gmeiner built the first Children's Village in Imst, Austria. He was committed to helping children in need - children who had lost their homes, their security and their families as a result of the Second World War. With the support of many donors and co-workers, our organisation has grown to help children all over the world.

The varied and worldwide projects of SOS - Kinderdorf International are non-profit, apolitical, interdenominational and nonracial.

The projects include SOS Children's Villages, SOS Family Strengthening Programmes, SOS Kindergartens, SOS Youth Facilities, Hermann Gmeiner Social Centres, SOS Relief Work, Hermann Gmeiner Schools, SOS Vocational Training and Production Centres and SOS Hermann Gmeiner Medical Centres.

The solution: Panda Security for Business

Panda Security for Business is a global security solution for companies that need to protect the workstations and file servers in their corporate networks. It provides the most advanced proactive protection in a multi-tier flexible architecture. Its features include network access and application control.

It is extremely easy to install and use, thanks to its centralized management console **Panda AdminSecure**, and ensures that every single point across the network is protected from all types of Internet threats: viruses, Trojans, spam, spyware, hackers etc.

It includes the innovative TruPrevent Technologies to protect workstations against unknown viruses and threats. Both the antivirus and TruPrevent protections are centrally administered.

Panda Security for Business is the only solution that covers all necessary types of protection as an all-in-one solution, eliminating the need to purchase additional security complements in the future.
